## Profile

Software Engineer with over four years of experience in full-stack web and mobile development. I build APIs and user-focused products with .NET, C#, React, and Next.js, and create AI-assisted short-form video content that turns concepts into engaging social stories.

---

## Key Responsibilities & Achievements

- Developed secure APIs, database architectures, and authentication systems while ensuring best practices in security and compliance.
  - Translated UI/UX designs into responsive front-end experiences using React.js, Next.js, and Vue.js, facilitating mobile transitions with React Native.
  - Collaborated with designers, product managers, and stakeholders to deliver innovative, scalable, and high-performing solutions.
- 

## Technical Skills

- |                                                                                                                  |                                                                                                     |
|------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| • <b>Front-End:</b> React.js, Next.js, Vue.js, HTML, CSS, JavaScript, TypeScript, TailwindCSS, Bootstrap, jQuery | • <b>Cloud &amp; Deployment:</b> AWS, Azure                                                         |
| • <b>Back-End:</b> Node.js, NET Core, ASP.NET, GoLang                                                            | • <b>Security &amp; Authentication:</b> JWT, IdentityServer4, OAuth, best practices in web security |
| • <b>Databases:</b> PostgreSQL, MySQL, MongoDB                                                                   | • <b>Version Control:</b> Git, GitHub                                                               |
| • <b>API Development:</b> RESTful APIs                                                                           | • <b>Mobile:</b> React Native                                                                       |
| • <b>Payment Integration:</b> Stripe                                                                             | • <b>Other:</b> Kafka, Redis, SOLID principles, OOP, Jira, Azure DevOps                             |
- 

## Personal Projects

- |                                                                                                |                                                                                                                                            |
|------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| • <b>NextSolution Template (2024)</b> – A full-stack starter template integrating ASP.NET API, | Next.js web app, and Expo mobile app.<br><a href="https://github.com/prince272/nextsolution">https://github.com/prince272/nextsolution</a> |

- **Communication Strategies for a Virtual Age (2025)** – [View Certificate](#)
  - **African Science and Technical Development (2019)** – [View Certificate](#)
  - **Technology, Creativity & Skills Development (2019)** – [View Certificate](#)
  - **SoloLearn C# Certificate (2017)** – [View Certificate](#)
- 

## Work Experience

### Hubtel: Software Engineer

- Developed and maintained web applications supporting internal back-office operations in compliance, finance, and business information management.
  - Worked on platforms including .NET and ASP.NET Core for backend development, as well as HTML, CSS, and Vue for frontend work.
  - Built robust APIs and user interfaces while ensuring high quality and adherence to security standards.
  - Resolved code quality issues and addressed SonarQube bugs and code smells, enhancing overall system reliability.
  - Wrote unit tests using industry-standard testing frameworks to ensure consistent application performance.
  - Collaborated effectively with cross-functional teams using DevOps practices and tools like Microsoft Teams, while following best practices in software development and quality assurance.
  - Documented APIs using Swagger and maintained system performance through logging and monitoring tools.
- 

## Education

- **University of the People: Degree, Computer Science** - [Certificate](#)
- **OpenLabs Ghana: Diploma of Education, Computer Software Technology/Technician** - [Certificate](#)
